

Mark Crysler Baddo

FULL-STACK DEVELOPER

Silang, Cavite, Philippines kuraisler.dev@gmail.com +63 945 293 4417 kuraisler.xyz

SUMMARY

Full-stack developer with 4+ years of hands-on project experience building web, mobile, desktop, IoT, and game applications. Shipped 16+ production-grade projects as a solo developer, including RFID attendance systems deployed at a real institution, AI-powered study and music platforms, disaster preparedness apps, and enterprise point-of-sale systems. Proficient in C#, .NET, React, Next.js, Kotlin, Flutter, and Python with strong focus on clean architecture, real-time systems, and cross-platform delivery.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, C#, Python, Java, Kotlin, Dart, HTML5/CSS3	**Frontend**	React, Next.js, Tailwind CSS, Vite, Framer Motion, Radix UI
Mobile & Desktop	Android SDK, Jetpack Compose, Flutter, Capacitor, WPF, Windows Forms, .NET, Unity	**Backend & DB**	FastAPI, Flask, Firebase, Supabase, PostgreSQL, SQLite, SQL Server, Redis
DevOps & Tools	Docker, Git, GitHub Actions, Cloudflare R2, Vercel, FFmpeg, OpenCV	**AI / ML**	Groq, Gemini, OpenRouter, Cerebras, Demucs, Tesseract OCR, face_recognition

WORK EXPERIENCE

Junior GHL Tech Specialist | Full-time

2026

GoHighLevel

- Configure and maintain GoHighLevel (HighLevel) client workspaces — custom pipelines, calendars, contact tags, and lead-source tracking — to keep sales and marketing data organized end to end.
- Build automated email/SMS workflows for lead nurture, appointment reminders, and follow-ups, reducing manual outreach and speeding up response times.
- Design and launch sales funnels, landing pages, and websites inside GHL, plus snapshot setup and third-party integrations (Zapier, webhooks, APIs).
- Troubleshoot account issues, reputation-management automations (review requests, Google Business Profile), and SaaS-mode configurations for ongoing client success.

MIS Technical Support & Software Developer | Internship

Jan 2026 — May 2026

STI College Santa Rosa

- Developed and deployed STIRAMS — a full RFID attendance management system (Next.js web dashboard + WPF desktop client) — serving 86 faculty and staff with real-time tap-in/out monitoring and offline sync.
- Built automated Daily Time Record (DTR) generation, replacing manual calculations with instant, accurate reports for printing during payroll periods.
- Maintained and optimized 165 computer units across 4 laboratories, performing system diagnostics, hardware inventories, and OS deployments to ensure operational readiness.
- Provided AV setup and technical support for campus events, including a 12-hour sprint to deliver STITimer for a college competition.

Independent Full-Stack Developer | Freelance / Personal

2022 — Present

Self-Employed

- Shipped 16+ production applications across Android, iOS, Web, Windows Forms, and Unity, covering domains from education and healthcare to e-commerce and disaster response.
- Built AI-integrated products using multi-provider LLM chains (Groq, Gemini, OpenRouter) for quiz generation, tutoring, and music stem separation.
- Deployed full-stack solutions with Supabase, Firebase, PostgreSQL, and Docker CI/CD on Vercel, Render, and Cloudflare.

FEATURED PROJECTS

SeismicWatch — Personal Project | **Solo Developer** 2026

Kotlin, Jetpack Compose, Room + SQLCipher, Firebase, Supabase, MapLibre, Nearby Connections

- Designed and developed an Android disaster-preparedness app from scratch, integrating Firebase and Supabase to deliver real-time earthquake and typhoon alerts from USGS/PHIVOLCS data feeds.
- Built family location sharing with Life360-style circles, emergency SOS (app/tile/widget/power-button), and offline P2P mesh relay via Nearby Connections for no-network scenarios.
- Currently in active development and informal beta testing with a small group of users.

Wiz — AI Study Platform | **Solo Developer** 2026

React 19, Vite, Tailwind CSS, Supabase, Capacitor, Groq, Gemini, Cerebras, Tesseract.js, PayMongo

- Built a cross-platform study app that auto-generates quizzes from PDF/DOCX/PPTX documents using a multi-provider AI chain with fallback (Groq → Gemini → Cerebras → OpenRouter).
- Implemented Scan-to-Quiz camera mode with hybrid OCR (Tesseract.js), spaced-repetition flashcards, and a cloud-synced document library.
- Integrated PayMongo subscriptions for Pro tier monetization with credit-based AI usage tracking.

STIRAMS (Web + WPF) — Capstone | **Technical Lead / Full-Stack Developer** 2025–2026

Next.js 14, TypeScript, Tailwind CSS 4, WPF, .NET 8, PostgreSQL, SQLite, Dapper, Supabase

- Led development of a full RFID attendance system with a Next.js web dashboard and WPF desktop client, giving admins real-time oversight of 86 faculty and staff at STI College Santa Rosa.
- Architected an offline-first sync engine with GUID conflict resolution linking .NET WPF terminals to PostgreSQL via Supabase — no data loss during network outages.
- Automated DTR generation and leave management workflows, replacing manual calculations with instant reports for payroll processing.

Musikk — AI Music App | **Solo Developer** 2026

Kotlin, Jetpack Compose, Media3 ExoPlayer, FastAPI, Demucs, Firebase, Cloudflare R2, Retrofit

- Developed an AI-powered Android app that splits songs into individual instrument stems using Demucs/HTDemucs with a DAW-like mixer (per-stem volume, mute, solo).
- Implemented audio effects (EQ, reverb, delay, chorus, compression) and practice tools (A/B loop, metronome, chord reader, key transposer).
- Built credit-based AI usage tracking with Firebase Auth and Cloudflare R2 for audio storage.

RN Ready — Open-Source Study App | **Solo Developer** 2026

Flutter 3, Dart, Riverpod, Groq, Gemini, OpenRouter, Flutter Markdown

- Built a nursing board exam (PNLE/NCLEX) review app with AI tutoring via multi-provider fallback (Groq → Gemini → OpenRouter).
- Created interactive anatomy quizzes with labeled diagrams, AI-assisted care plan generation, and dynamic MCQ banks with progress tracking.
- Deployed across Android, iOS, Web, and Windows from a single Flutter codebase.

YT Converter — Media Tool | **Solo Developer** 2026

Next.js 16, React 19, TypeScript, FFmpeg, yt-dlp, Cloudflare R2, Upstash Redis, Docker

- Built a queue-based YouTube to MP3/MP4 converter with playlist support, quality selection (128–320kbps / 360–1080p), and real-time progress polling.
- Implemented async job processing with Upstash Redis and scheduled cleanup of Cloudflare R2 storage.
- Deployed as a Docker containerized service with 9 API endpoints.

FEATURED PROJECTS (continued)

St. Benedict Hospital Management System — School Project | **Technical Lead / Full-Stack Developer** 2024–2025

C#, .NET Framework 4.7.2, Windows Forms, SQL Server, iTextSharp, QRCoder, Guna.UI2

- Led a team of 8 developers to design and build a hospital management system covering patient registration, appointment scheduling, medical history tracking, and automated billing.
- Built the core billing and prescription module in .NET Framework 4.7.2, implementing PDF receipt generation with iTextSharp and QR code verification.
- Shipped across 8 iterative versions with role-based dashboards for doctors and front-desk staff.

Pet Haven — School Project | **Technical Lead / Full-Stack Developer** 2023–2024

C#, .NET Framework 4.7.2, Windows Forms, SQL Server, Guna.UI2, iTextSharp, QRCoder

- Directed a team of 6 to build a pet shop and services management system defining the technical architecture for inventory, customer tracking, and billing.
- Implemented automated receipt generation with QR codes and real-time sales dashboard using Guna UI2.

Neural Lens — Facial Recognition System | **Solo Developer** 2025

Python, Flask, OpenCV, face_recognition, SQLite, Docker, GitHub Actions, bcrypt

- Built an enterprise facial recognition attendance system with encrypted 128-dim face encodings (no raw images stored) and AES-256-GCM encryption.
- Implemented role-based access (admin/manager/viewer), auto clock-in/out, and ON-TIME/LATE/UNDERTIME status calculation.
- Containerized with Docker and automated CI/CD via GitHub Actions.

Silid 12:01 — Unity Game | **Solo Developer** 2025

Unity 6, C#, URP, NavMesh, Barracuda, Unity Input System, Timeline

- Created a first-person survival horror game in an abandoned school with a Weeping Angel-style enemy that freezes when watched by the player.
- Wrote 130+ C# scripts covering AI pathfinding (NavMesh), visibility detection, flashlight/stamina mechanics, and a cutscene system.
